WHO ARE WE?

Aqua Plastech supplies relevant high-quality water saving products and solutions to the Southern African private, retail and agricultural markets.

Our company aims to ensure that customers suffer minimal water losses especially taking into account that water is a precious resource that will become even scarcer in the future.

We offer farmers, golf courses, game lodges, fish farmers, dam and pond owners' unique innovations to seal leaks and cracks in earth dams, cement dams or various substrates.

Aqua Plastech exclusively distributes a wide range of waterproofing and sealant products manufactured by Shalex Industries in Australia. The Shalex range is either tested in the USA according to ASTM standards or the Australian Standards Bureau and have built a reputable brand globally since 1974.

WHAT IS DAMIT™ DAM SEALER?

RAPID POLYMER SEALER for Earth Dams

DAMIT™ Dam Sealer is an advanced, non-toxic, polymer powder which can be used to seal leaking dams and ponds. The polymer is applied to a leaking dam by scattering the powder across the surface of the water.

The polymer is positively charged and is drawn toward the bottom of the dam which has a negative charge. The water pressure (hydrostatic pressure), which causes the dam to leak, forces the polymer down into cracks and crevices as it sinks to the bottom of the dam. Once activated with water, the polymer will expand in size and bind to other polymer particles to form larger groups of particles, which effectively slows and stops the leak. The polymer will continue to expand over a number of hours and forms a flexible plug that withstands water pressure. The positive charge of the particles will also attract any silt and suspended matter in the water downward to the bottom, which acts to embed the polymer within the soil structure and minimise any disturbance or movement of the polymer that may be caused by future water inflows.

DAMIT™ Dam Sealer is insoluble and will form a long-term plug-in cracks and porous soils. The polymer stays active when wet and can withstand continuous wet/dry cycles to accommodate rising and falling water levels due to seasonal water level variations in the dam or pond. The polymer is totally safe and approved for use with potable water and will not harm humans, fish, aquatic plants or animals.

DAMIT™ Dam Sealer will eventually break down to form a harmless mix of water and carbon dioxide over time.

Application:

One application is normally sufficient however follow-up application may be required for problem leaks.

Coverage:

- 5 litres = approx. 50m²
- 15 litres = approx. 150m²
- 200 litres = approx. 2000m²

For high salinity increased dosage rates are required.

Activation Time:

0 - 2 hours

Fully Activated:

4 - 7 days

Clean-up:

Sweep up spills of dry DAMIT™ Dam Sealer or, if wet hose off with large amounts of water.

Shelf Life:

5 years in a dry sealed container.

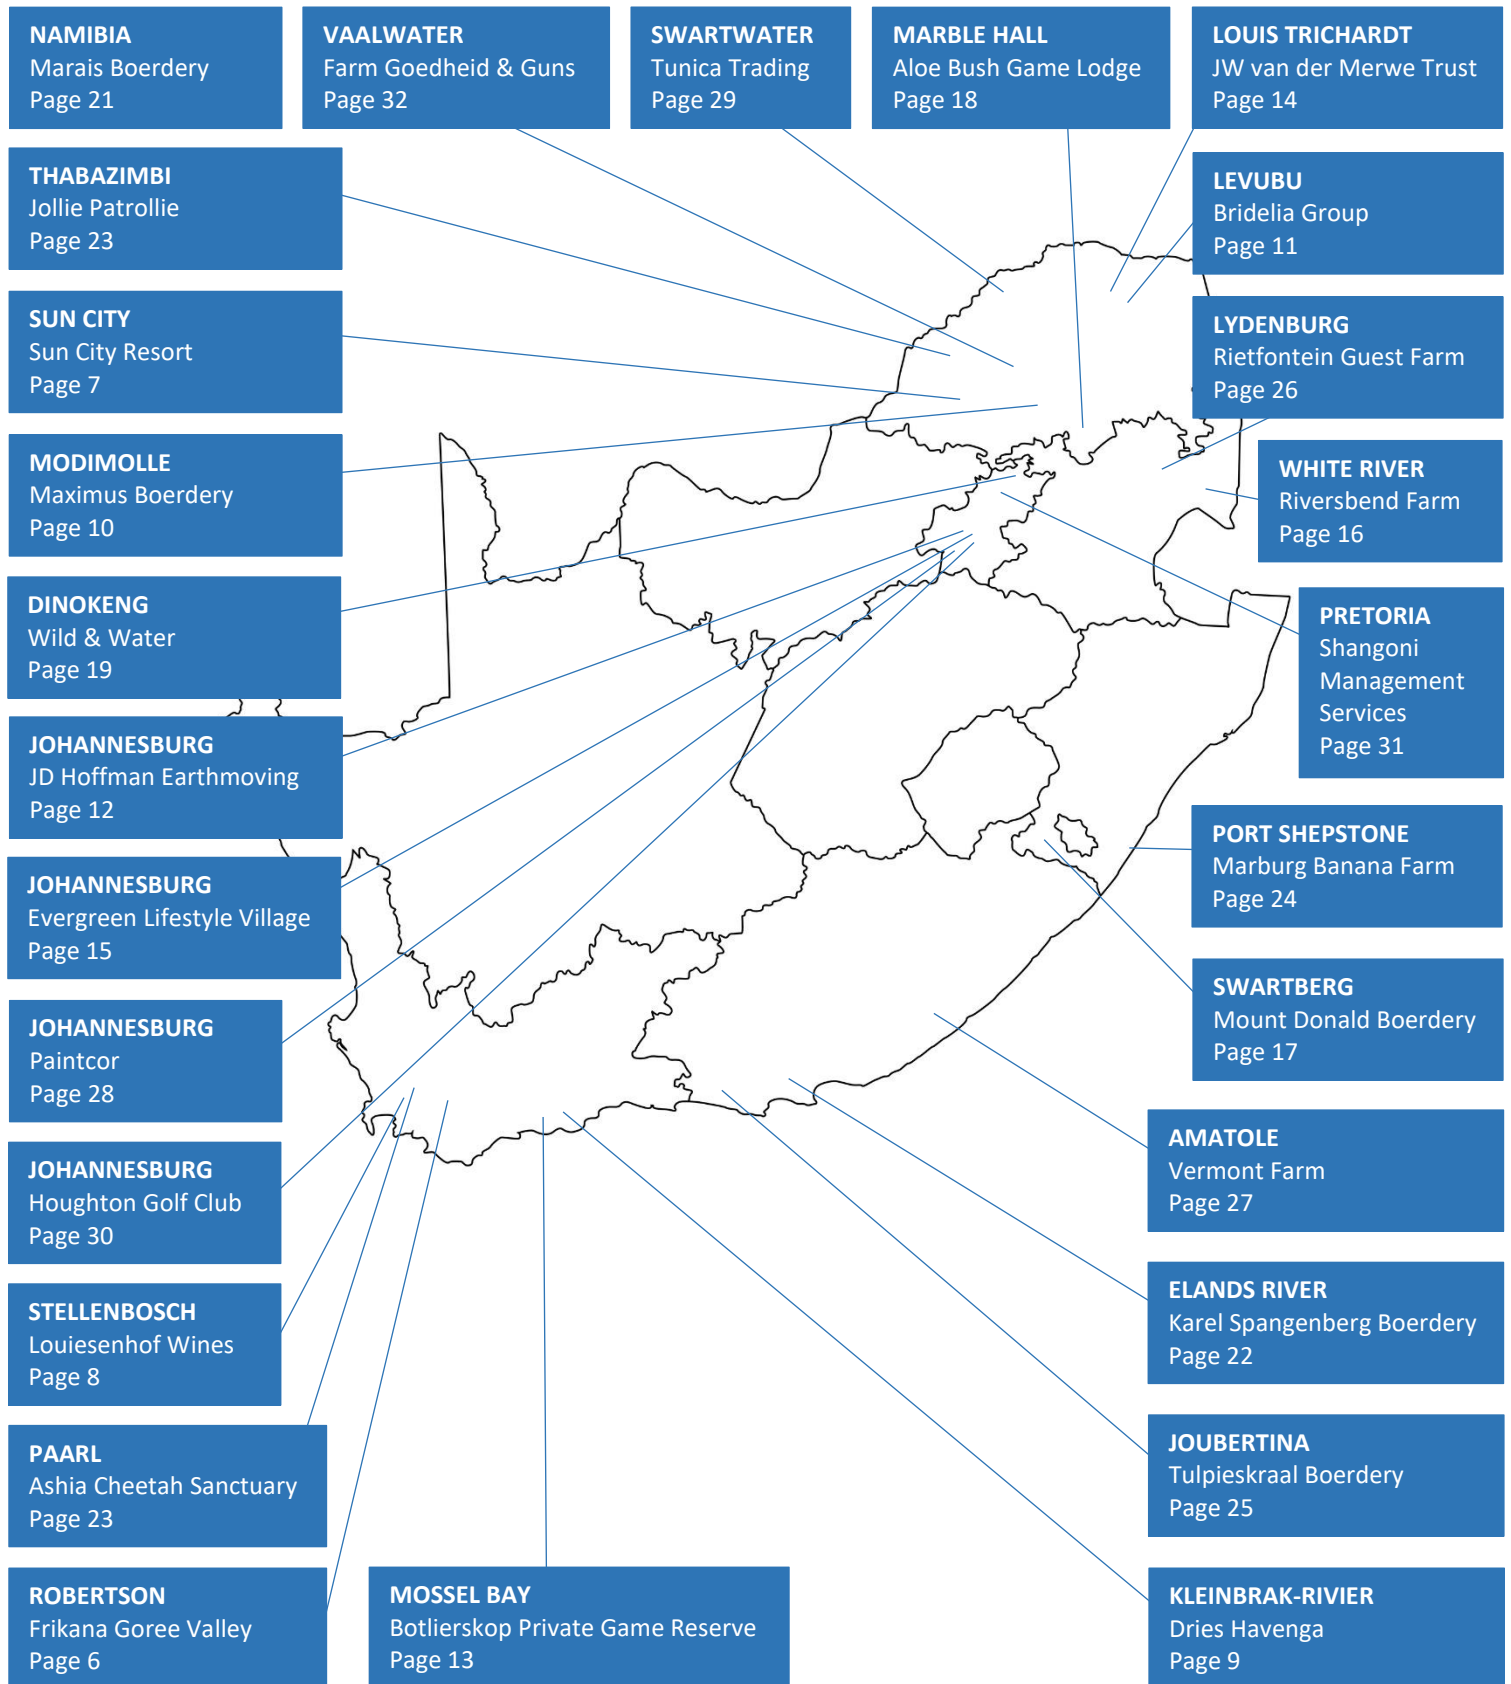

Store Below:

50°C

Application Temperature:

Water temperatures above 5°C

Reference – Damit Dam Sealer

I found a small unused dam on my farm, it was about a 2,000 square meter dam, I used by Digger loader to make it a little deeper. When I filled it, I noted that it had a leak on downward slope side. I did not want to use plastic to seal the whole dam; besides not being natural, it's dangerous and so I chatted to a friend who mentioned that he had recently come across Damit.

I called Andre up and asked him more about the product. It was not cheap, so I was rather apprehensive about using a new product. Since this dam was rather small, I decided to take a chance and I'm very glad I did. Andre applied the product in July 2022 and since then I've not had a leak on the dam. I am very satisfied with the product and now considering using it for a much larger application on my bigger dam, that has a much larger leak.

So far, I am very impressed with the product. Feel free to call me if you have any questions.

Sincerely

Garron Reynolds

NOTIFICATION OF AWARD AND REFERRAL

Company: Aqua Plastech

Product: DAMIT Earth Dam Sealer

Description: Sealing of Gary Player No. 18th dam

Dear Sir/Madam:

We had a serious dam wall leak on the 18th hole of the Gary Player Golf Course and Country Club at Sun City, this was a serious threat to a successful Million Dollar Golf Challenge end of 2022 had the wall collapsed due to the weak wall. We urgently needed a solution and came across Damit Dam Sealer.

Aqua Plastech was contacted and Ryan came out several times to survey the dam and formulate a plan to repair the dam wall in time for the event. The repair took 3 days and a remarkable improvement could be seen within 2 days with almost no water seepage anymore! Any other solution would have required the dam to be drained and the flora and fauna destroyed, definitely not an option at the time with the Million Dollar Challenge only a few weeks away and no time for Plan B.

We are very pleased with Damit Dam Sealer, a product that is almost too good to be true! We've seen the results and will definitely recommend Aqua Plastech and Damit Dam Sealer for any leaking dam or repair project.

Sincerely,

A handwritten signature in black ink, appearing to read "Johan Smit", with a long, sweeping underline.

8 February 2023

Hello André and Jaco

Feedback on your product **Damit Dam Sealer**

We, as farmers, are sceptical people and when you first told me a POWDER can seal a dam I was also slightly sceptical!

Initially I looked at Clay/Bentonite to seal the dam and the disadvantages were as follows:

- All the water in the dam would have to be emptied out.
- All fish would die.
- Clay would have to be driven in by large trucks.
- Roads would be damaged.
- Large machinery had to be rented.
- The work would take an extended period of time to complete
- Expensive - estimated cost R 800 000

I also looked at dam "liners" - slightly cheaper, but more or less the same disadvantages as the above.

You guys came to seal our dam with the drone in mid-October 2022 and I held thumbs that it would work.

I was surprised when the dam level started to rise after just one week. We planted pegs where the dam level was. The only source of water was our Theewaterskloof supply during this period as it did not rain.

After 3 months, there was a rise of 270 mm !!! This means that the dam lost 2 700 000 liters every three months.

The CONCLUSION:

- The 3-hour time factor to spread the DAMIT using the drone was definitely a bonus!
- No loss of fish and the fish eagles could continue hunting.
- Your product was VERY cheap @ R 75 000, but the best is the savings to our natural resources.

Greetings and again many thanks for your splendid work and product.

Lodewyk Joubert

27 January 2023

Good day André

Herewith our thanks and satisfaction with your product!

You know how impatient I was, because we were worried that the dam wall might break due to the serious leak on the floor of the repaired earth dam.

There was already reduced seepage the next day, after we had followed the prescribed application guidance.

On Day 3 all leaks stopped and we were no longer worried when it started raining badly again the next day and we now have a full dam again.

Thank to you again for understanding the seriousness of our problem and making an extra effort to get the product to us faster.

You may pass on this recommendation to anyone at any time.

Have a nice weekend

To Whom it may Concern:

DAMIT Dam Sealer:

The story about the two dams on the farm Vrede in Limpopo Waterberg starts more than 7 years ago when the property was acquired from the previous owner. He sold the farm after a court case conclude the water supply from a "manmade" trench was a favour and not a right, resulting in the dams going dry the first time in years. The property was purchased irrespective the empty dams, advocated in the sales pitch was that with a week of good rains the dams will fill-up, turned out to be true. Unfortunately given the dry state of these dams it never sustained the water levels and in early wintery all water leaked given no sustainable inflow.

After observing the eco value of the dams being full it was decided to address the situation, hoping to get a head-start with good rain, not to happen the neighbour cut-off the remaining flow that could fill the dams during the season. This required that an expensive pumping station be installed but with the leakage it remained impossible to fill the dams with water, wasting many litres of diesel a week.

Upon investigation numerous options presented itself on how to seal the dams.

1. Dam linings, cost R300 000+ for one of the dams not both
2. Bentonite, 22 tones required plus additional expensive groundwork with capital equipment, total cost R500 000+
3. DAMIT dam sealer, 45 litre for R22 500 plus courier cost of R3 000 total cost R25 500
4. Demolish the dam wall and rehabilitate the land

We decided to try DAMIT, should this not be successful, demolish the dam wall.

Reaching out to Belinda on 18 January 2023 an information session with all the required detail of my dam and the product resulted in deciding on option 3, DAMIT! The product was delivered overnight with the required applicator to assist with appropriate application, very important. The application occurred on 21 January 2023 and now on 26 January the small dam is sustained at 100% level and the large dam at 60% and filling-up daily.

This is an incredible product due to cost for value, people behind the business Aqua Plastech and their customer centricity. As my friend Jannie Theron said whilst assisting with the application, "it will work because exactly what they said will happen is happening".

Louis Maritz

TESTIMONIALS

26 January 2023

Good day.

I am writing to you regarding your product "DAMIT™ Dam Sealer".

Last year the farm's earth dam started leaking worse than before, and we were compelled to attend to it urgently. Streams of water began to trickle out of the embankment!

After thorough research, I decided to put DAMIT™ to the test.

I applied it according to the recommended quantity that I had spread out on the water with a small boat all along the side of the dam in 5 strips, 3m wide.

I was really stunned by the results. It nipped in the bud any doubts I still had in your product! Only the next day could I already see a change, and after just 2 days the dam stopped leaking altogether.

I would like to compliment you on your good product! It is easy to apply and very effective. I would really recommend it to anyone struggling with leaky soil ponds.

To whom it may concern, this letter serves to confirm that we made use of Aqua Plastech to address a major leak in our dam wall in our estate.

Andre recommended we use: DAMIT Dam Sealer to prevent holes from forming again and to seal the dam walls around.

We have used the Damit and to date have not had any holes or corrosion in our dam wall. This product has worked wonderfully in addressing the issues we had, and our dam is looking better than ever.

I would gladly recommend Aqua Plastech as their product works really well and their service was excellent.

Warm Regards

SEALING OF LEAKING DAM

Our earth dam was leaking to such an extent that we were not able to store enough water for our crops – macs and kiwis.

We sealed our 3000sqm dam with Damit Dam Sealer. The Damit was applied with a drone. We are very satisfied with the result.

The dam is no longer leaking resulting in much better control over our water supply.

Best Andre and Belinda

I have been purchasing your 15-liter Damit buckets for a number of years to seal cattle drinking spots across my farm, these aren't very big or very deep, but they are now keeping water where in the past I could never had dams like these without animals destroying the plastic lining.

I just want to say thanks for a great product that has really made a difference to the health of my cattle.

Feel free to use me as a reference.

The dam seal powder are wonderful. We bought some for our leaking dam. Wellll the dam that was leaking. No more leaking dam. Thank you so much Andre for the good service.

TESTIMONIALS

Aloe Bush Game Lodge Marblehall - Limpopo

1 March 2022

Dear Belinda

I just want to give you feedback on your product Damit Dam Sealer.

I had an earth dam constructed on the farm in October 2021. The contractor did not compact the 3.5 meter dam wall properly. Hence after all the rain in December and January the dam filled up but was leaking like a sieve. I was devastated because I did spend a lot of time and money on the dam.

I googled for any product that I could use to help sealing the earth dam. I found your product and after a few calls to your company I decided to give it a try. The dam wall area that was leaking was about 80 meters x 3.5m in height. We took two buckets of 15 litres and applied it with a small handheld Gardena fertilizer applicator sitting on a float in the dam spreading it towards the dam wall. What a messy exercise it was! The product formed a thick slimy layer on the water, and I had my doubts. But.... Two days later I noticed a reduction in the leaking. After about two weeks there was a few places that leaked and after about four weeks all the leaks stopped along the dam wall.

Although the application is messy it is a miracle product and it saved me a lot of money and water.

Thank you for an absolutely great product.

You can refer any hesitant clients to me for a referral. I am glad i bumped into Damit.

Hi Andre and Damit Team

I just want to thank you for this amazing product, Damit really lives up to the promises! I have a game farm in the Kalahari at Springbokpan and have struggled with dams that only hold water for 2 to 3 days and then be filled at tremendous expense.

My Rhino's have never been happier than now, they used to beg for water but now these dams only have to be topped-up every 2 weeks for a few hours. Really impressed that Damit can deal with Rhinos, there was nothing else that really could have done it and definitely not a plastic lining.

I can definitely recommend Damit to anybody that takes water saving seriously. I'll be getting more for all my dams!

Regards

Dewet Marais

Karel Spangenberg Boerdery
Elandsrivier
Oos-Kaap

2 Maart 2022

Ek het onlangs vee suipings, klei gronddamme en bestaande gronddamme op my plaas in Elandsrivier in die Oos-Kaap skoongemaak en spoelgrond uitgehaal. As gevolg van die komposisie van die grond wat baie klipagtig is is die instandhouding 'n probleem. Die water digtheid was egter 'n uitdaging.

Ek het egter op die produk "Damit" afgekom en dit goed gedink om dit te probeer. Ek het vir André van "Damit" gekontak en met sy advies "Damit" gekoop. Ek het die lekkende vee suipings en damme op sy aanbeveling behandel met ongelooflike resultate. Dit het dadelik die vee suipings standhoudend gemaak en ek kon dit aanwend as addisionele vee suipings na reëns aangesien dit nou mooi water hou.

Ek het ook gevind dat dit geensins enige invloed op enige plante of diere lewe in en om die dammetjies het nie.

Ek het groot vertroue in hierdie produk en dit is 'n baie ekonomiese en bekostigbare oplossing en ek sal dit definitief aanbeveel.

25 February 2022

Dear Aqua Plastech

For quite a while we have noticed that our 1 hectare dam was leaking, leaving wet patches on the outside of the wall. Andre used a drone to dispense the polymer, which seemed to definitely have solved the problem, as there is no more visible wetness on the outside.

If we were to have emptied the dam to seal the dam wall, the cost of the operation would literally have been ten times more.

I love the fact that it is harmless to the environment.

Wie dit mag aangaan

Ek, Andre Kritzinger, boer naby Joubertina (Langkloof). Ek het Dammit gebruik en is baie tevrede met die resultate. Ek het ook maar n kans gevat en is baie bly ek het dit gedoen. Dis baie goedkoper as om jou hele wal oor te doen en dit werk.

Andre Kritzinger

My leaking farm dam was

My leaking farm dam was a source of annoyance. After one treatment it now seems to be holding its own.
Easy instructions and easy to apply.

TESTIMONIALS

2 November 2021

Hi Andre,

With regards to your product Damit Dam Seal I would like to confirm the following.

My dam was not built to proper standards of Lear then compaction and Lear again and compact.

I first decided after numerous attempts to seal my dam on the guest farm to try this product.

I have large Koi in my dam so to remove them is a problem therefor I couldn't use bentonite etc.

When I received the Damit Dam Sealer I spread it as per the instructions and within an hour the water had subsided to a trickle and then overnight stopped completely.

This was amazing.

My dam started to leak after +/- 2 years but I don't attribute this leakage to the product. I think it's the freshwater crabs causing the problem because it started leaking in an area not previously treated with Damit.

Although my dam is quite small 30m x 20m after trying to seal the dam for over 6 years with no success I can recommend Damit Dam Seal.

Best Regards

TESTIMONIALS

Reference Letter: Damit Dam Sealer

To whom it may concern:

This letter serves to recommend this incredible product to anyone that wants to seal their dams from loss of water.

We have used this product on 3 of our natural dams on our Game Reserve in the Eastern Cape and have been astounded by the magnificent effect it has had in retaining water which we were losing on a daily basis.

Thank you to André Fourie for his fantastic service too.

I have never had to phone to check up on an order's whereabouts and your product is on our doorstep before we can think of following up.

Kind regards,

Dear Andre and your Team at Aqua Plastech

As the managing director of a company that focuses purely on quality products that do what they say they do, I would just like to compliment you on the product you sold me "Shalex Damit Dam Sealer" This is truly a product that works.

I approached you for a solution to a private problem that I had with my dam and you recommended Damit, you gave us all the tips to using the product and sent us on our way. We used about 1 liter from the 5 liter we purchased and used it in the corner of our dam that we suspected the leak to be coming from. Well, to our complete surprise, the next morning the water level had raised and our leak had stopped. You had recommended that we use the product when our leak is at its worst and the pressure was high, we used it at low pressure and the product still worked an absolute treat, we are now waiting for increased pressure so we can use the rest of the product.

At first, I was slightly hesitant at the price, as its not a cheap product, however, the thousands of Rands you have saved me from renting out heavy machinery to try repair our leak is astronomical, the value you get from this product is second to none. I would just like to commend you and your team on a brilliant product and the service to match it.

Sincerely,

Warren Williams

LETTER OF APPRECIATION

MR ANDRE FOURIE

AQUA PLASTECH

Good day Mr Fourie

I hereby want to comment you and your company for your professional and speedy service on our orders on your Damit product.

Our farm is situated on the Botswana border, and we are farming with Macadamia nuts. We have a big natural "channel" in which we catch our rainwater, size 330m long, 22m wide and 3m deep.

We sealed 50% of this channel with the Damit product during the 2018/2019 year, and the result was so satisfying, that my employer decided to seal the other 50% also with the product. We placed our order, and your company manage the order even until it was couriered on our request to our local farmers shop (NTB Swartwater), right on your estimated time of arrival(after the product was imported).

Thank you again for a wonderful dam sealant product that works perfectly, and a very professional service.

Future dams are in a planning phase, and we will definitely make use of your product and services again.

I will recommend you and your product to anybody who wants a product which seal a raw piece of earth...

Keep up the excellent work

Ref: Reference Letter – Aqua Plastech

We at Houghton Golf Club noticed an increased level of water seepage in our 9th dam quite some time ago. The dam, which holds about 25.000.000 liters of water was originally built in 2006/2007 and had a bentonite base. Over time with crabs, fish & general wildlife disrupting the dam base we found a weakened structure in the dam wall and this subsequently resulted in considerable water loss.

Having done some investigation into possible solutions, we decided to move forward with Andre Fourie and Aqua Plastech to seal the dam. Andre arrived with his dispensing unit which was actually a large drone to ensure an even distribution of his product over the entire dam area.

After the first few days we did notice less seepage and over time the wet areas adjacent to the dam did lessen in size. Six to eight weeks later we had no leakage whatsoever and we no longer have any leaks at all

Would certainly recommend this product to anyone looking to seal their water dams.

Thanks Andre, well done!

To: info@aquaplastech.co.za
Subject: Damit Performance

Good day Aqua Plastech

I recently purchased the Damit product from Aqua Plastech via their website, and received the product the next day.

I applied the Damit to an earth dam that I have been struggling to seal for more than 10 years. The soil type is very sandy, and it also seems that water is seeping through the compacted dam wall. I have added 2x5m² truckloads of sludge (At a huge cost). Have also added 1000kg bentonite clay, installed a plastic liner inside the dam wall, all with not much improvement.

With the recent good rains we received, I decided to try the Damit product distributed by Aqua Plastech (used only 5kg applied close to the dam wall), and to my surprise a few hours later the seepage visible below the dam wall reduced drastically, and the dam seems to retain water thousand times better than in the past.

The water has since cleared up nicely (water was always dirty as it leaked out before it could clarify), and our children are now enjoying a swim in the dam every day.

Thanks for a brilliant product, I can really recommend it.

Kind Regards

Does the job. I had

Does the job. I had a leak around 6 inch from the desired height of my clay pond. I knew where it was but no amount of clay infill would stop it. A small amount of Shalex granules each day for a week was enough to seal the holes and cracks, and it is now holding water above the initial leak water line. This product works.

Bobby F. Verified Buyer

Ref: Reference Letter – Aqua Plastech

25th August 2020

I bought a Game farm in March 2019 in the Vaalwater district and noticed this farm had 3 seasonal dams. Between March and May, the water levels in the dams decreased as the rainy season stopped and all 3 dams ran completely dry by end of May. We had to constantly fill up the 2 dams especially as one was situated by the hide and the other dam situated by a feeding space for the game. The constant filling up of water had an impact on the water consumption cost and we needed to do something drastically to try and retain the water levels.

We saw an advert on the Aqua Plastech product and decided that because these 2 dams were situated at two critical spots we will test it first on the small dams to see if it will work as well as save as money on water consumption. We started with the first dam at the hide at the end of May which ran totally dry with only a small wet spot left. After treating the dam with Aqua Plastech the dam's water level has since not dropped and is retaining its water levels. Because of the results in this dam we decided this year to seal the second dam with the Aqua Plastech product as we have to keep on filling it up and if the seal works like in the first dam we will save some more cost and water consumption. To date our second dam retained its water level and has not dropped or needed filling up since using the Aqua Plastech product.

Our third dam is a large dam and because we saw the amazing results in the 2 smaller dam's we decided to try this product on the bigger dam as from a cost perception it will work out more affordable than doing dam linings etc. We have purchased Aqua Plastech drums to the value of R120 000 and is currently just awaiting the rainy season so we can start sealing the big dam. We are very hopeful that after this all 3 our once seasonal dams will then remain permanent dams giving the game water all over our farm.

I would certainly recommend this product to anybody wanting to seal their dams. Please feel free to contact me should you require some personal input regarding this product and what I have experienced. I will also gladly share before and after photos upon request.

Kind Regards

JJ Fritz
